CLIMATE ACTION NETWORK

MESSAGES FROM CAN INTERNATIONAL

MESSAGE FROM THE BOARD

2016 was a critical year for CAN. It was a year of transition from focusing on a well-defined moment and objective, the Paris COP 21 outcome, into a post-Paris world, in which there was no clarity on where the climate community would go. CAN did everything it could to prepare; learning from the days of COP 15 in Copenhagen, it was clear that the Network could not wait until Paris was over to start preparing. The strategic process that was started in May 2015, culminated in a series of meetings in Berlin in early February 2016. These meetings gave CAN an edge by being the first climate community that was ready to hit the ground running.

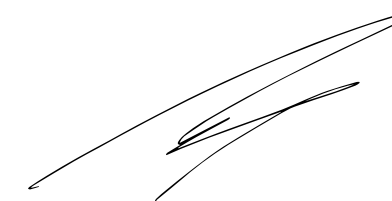

Board members were involved in the Strategic Planning Committee, which was formed to design and support members and the CAN International Secretariat in the process of creating a new strategic framework. The Board closely followed the process during and after the Berlin meetings to ensure that the feedback of the members was well reflected within the strategy and at the end of the process, can proudly say, that the resulting 2016–2020 strategic plan has been reflective of the priorities of not only CAN members, but of the wider climate community.

The new strategic framework came with new challenges. The international climate world was not focused in a post-Paris era, and work was required in a number of diverse areas. CAN needed to change and engage in new areas, such as sustainable finance. This required new structures, staff, policies, and methods of operation within the CAN International Secretariat. At the same time, CAN has been able to develop broad new partnerships with a number of different constituencies, increasing our political coordination

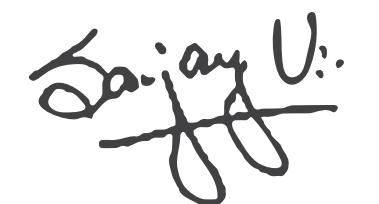

beyond the CAN membership, bringing everyone together in new structures of post-Paris coordination.

Also In 2016, CAN was able to establish itself as a key convener in several various spaces, providing tools in a variety of languages, which facilitated outreach out to a larger number of people, bridging geographies and aiding several critical discussions.

Throughout the year, Board members not only closely followed the critical process of change, but led on certain processes themselves, including helping to shape the CAN Secretariat Human Resources Policies and Procedures Manual, the CAN Carbon Policy that was designed to help regulate carbon emissions of the organization, and a Breach of Conduct Policy to meet the Secretariat and members' needs and demands.

MESSAGE FROM THE DIRECTOR

After any major turning point, or achieving an important goal, like the Paris Agreement, each organization goes into a process of reflection in relation to its importance, relevance, and reason for continuation. What comes out of such process is both exciting and frightening, as it presents a rebirth to the organization. Like in the case of any new born, the future is a mystery. We fought hard to achieve the Paris Agreement, and CAN's role has been well recognized. The Network is very respected, trusted, and valued in the climate community; which is the currency a convening network like CAN survives on. Nevertheless, are we up to the challenge in a post-Paris era. In the first few months of 2016, many asked me if I would be leaving CAN to find a new challenge. It seems that in the climate movement, many leaders in the community do a career shift after every major COP, like Copenhagen or Paris. To be very honest, during the five years as the head of the CAN International Secretariat, I did ask myself constantly "where can I make the most difference". The answer has always been CAN, and what we have achieved before and during the Paris COP is the proof. Despite all that CAN has achieved in the past five years, I still believe that the network has a lot of untapped potential for change. Being the backbone of the climate movement for the past 28 years, every year CAN's role becomes more and more important.

2016 was no different. The year was a good year for CAN, where the Network was able to define new strategic directions that provided guidance to the whole community, ensuring that we lose no momentum, and keep the movement working together in a highly effective manner. As a result, new wins materialized throughout the year, including the entry into force of the Paris Agreement and the announcement of the CVF Vision.

Wael Hmaidan at Berlin Strategic Planning Meeting.
Photo Credit: CAN-International.

The US elections at the end of 2016 has been the biggest disappointment. The new US administration presents a new challenge for 2017 and beyond. Nevertheless, I am full of hope and faith in our ability to overcome this challenge. The climate community was the first to organize a global response to the elections, showing that we are well organized and prepared.

Wael Hmaidan
Director
CAN-International

HIGHLIGHT OF 2016

POST-PARIS STRATEGIC PLANNING PROCESS

In order to avoid a gap in momentum, such as the one the climate community experienced in 2010 after COP15 in Copenhagen, CAN decided to embark on a strategic planning process while fully engaged in campaigning towards achieving a successful outcome in Paris during COP21. From mid-2015 onwards to March 2016, CAN's members and partners worked together on the planning process that eventually led to the CAN 2016–2020 strategic framework. This was a highly participatory process, including three face-to-face international meetings, two on-line surveys, one-to-one conversations with emerging and established leaders within the climate community, webinars, think pieces, and regular invitations to comment on various drafts of the strategic planning document. The process culminated at the Strategic Planning Annual Meeting (SPAM) in Berlin in February 2016, where a large group of CAN members, with representation from all CAN Nodes, finalized the six new strategic priorities of the Network:

- 1** Operationalisation of the new International Climate Regime
- 2** Bring climate impacts to the front through highlighting the plight of vulnerable communities
- 3** Delivering on the 2050 National Decarbonization Plans
- 4** Continuing the momentum of the 100% RE campaign
- 5** Shifting private and public financial flows towards 100% RE vision
- 6** Building a more vibrant and effective climate movement

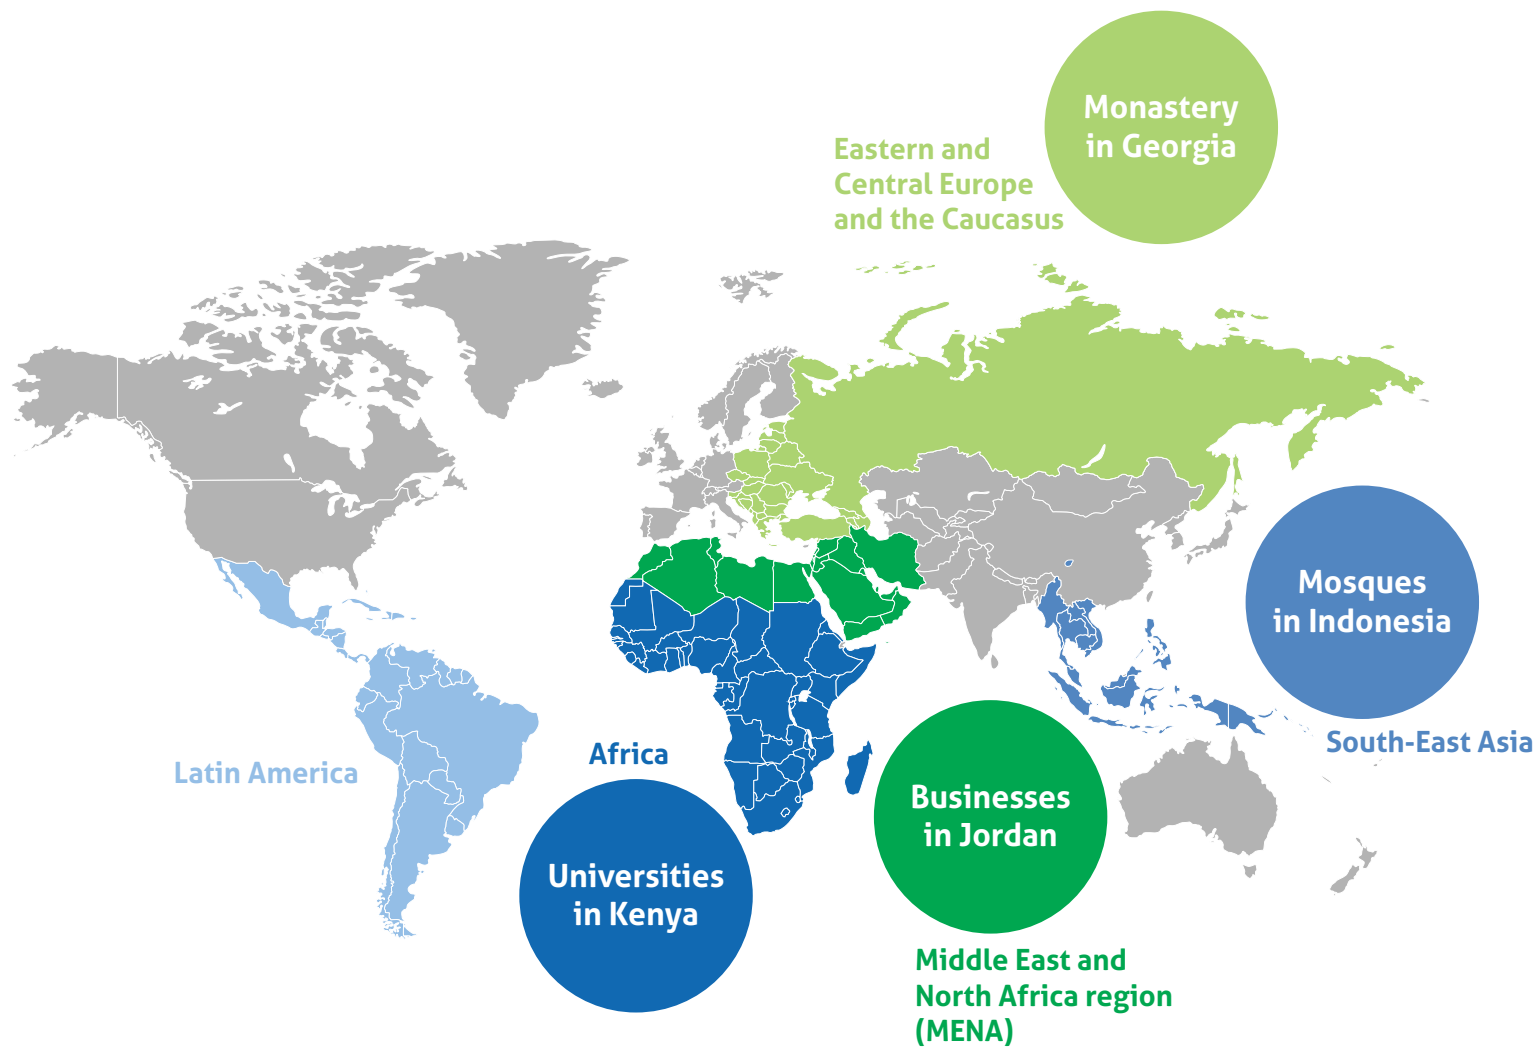

The CAN Secretariat organized the Secretariat and Node Coordinators Annual Meeting (SCAM) to further translate the strategic framework into regional and national activities and discuss how to implement it at Node level. This meeting ensured strong buy-in of the framework by nodes, which will be crucial to ensure that the vision is linked to and enacted by on-the-ground advocacy and campaigning.

REGIONAL CAMPAIGN WORK

FIVE REGIONS & CAMPAIGNS

GUIDING THE WIDER CLIMATE COMMUNITY

CAN does not only develop a strategic vision for its own network, but also helps the wider climate community in defining their own strategic plans. Directly, after finalizing the CAN Strategic Framework, CAN organized a Strategic Partnership Workshop for the wider community in February. Later in the year, together with a number of partners, a series of strategy meetings was convened, dubbed the “Climate Action Hub,” during September 2016 in New York City. These meetings brought together leaders from civil society, business, government, UN Agencies, local authorities, and faith communities, among others, to exchange plans and explore collaborative potential around a number of pivotal topics, aligning the climate community on key strategic issues.

Bridges between various organizations were built, key areas of opportunity identified, and an assessment of where joint efforts would add most value were carried out — establishing CAN as a key multi-stakeholder convener, and provider of strategic vision for the whole climate community.

Given the success of the Climate Action Hub and Strategic Partnership Workshop, members and partners unanimously requested to reiterate this collaborative convening, plans were made to organize similar gatherings in February and September 2017, and the years after.

100% RENEWABLE ENERGY CAMPAIGN

CAN successfully drove forward the global 100% Renewable Energy (RE) campaign, mainstreaming the concept, by prompting several 100% RE adoption pledges by various institutions. In 2016, CAN established the 100% RE taskforce, bringing together key organizations working on the issue from various sectors, including NGOs, businesses, local authorities, faith groups, among others. The work of the task force created important synergies and amplified the work of the individual organizations.

CAN succeeded in positioning 100%RE at the center of the climate movement in 2016, which prompted the groundbreaking Climate Vulnerable Forum

Berlin Strategic Planning Meeting.
Photo Credit: CAN-International.

(CVF) declaration of COP22 that committed around 50 countries to transitioning to 100% domestic renewable energy as rapidly as possible. CAN’s efforts for 100RE and influence were also reflected in the global Breakfree mobilizations, the multi-stakeholder 1.5°C campaign and other activities in COP22.

The CAN Secretariat supported various national 100% RE campaigns in five regions; the Arab World, Latin America, Africa, Southeast Asia, and Eastern Europe, the Caucasus and Central Asia (EECCA), to showcase the achievability of the transition process. These included campaigns to drive universities in Nairobi, the city of Johannesburg, monasteries in Georgia, businesses in Jordan and mosques in Indonesia to transition to 100%RE.

The Secretariat also designed a starter guide for 100% campaigns (<http://transitioninaction.org/100-re-starter-guide/>), which provides arguments, graphics, campaign techniques, and a step-by-step guide to developing 100% pledge campaigns. Moreover, the Secretariat developed an online repository of 100%RE materials entitled “Transition in Action,” (<http://transitioninaction.org/>) which includes a comprehensive store of national reports on feasibility,

an interactive map tracking the geographic transition to 100%RE, fact sheets on the barriers and myths about 100%RE, and how to address these. This repository provides solid foundations for stronger capacity in campaigning.

At COP 22 the 100% RE taskforce lead by CAN, organized a first of its kind multi-stakeholder event, which gathered governments, cities, territories, businesses and civil society to pioneer the shift to 100% Renewable Energy and work to limit global warming to 1.5°C above pre-industrial levels. The event was co-hosted by the COP 22 presidency and the Climate Vulnerable Forum (CVF) and supported by the United Nations Development Program (UNDP) and the UN Sustainable Energy for All (SE4ALL). The event demonstrated the feasibility, economic viability and ethical imperative to transition to 100%RE. At the event, the President of the Marshall Islands, H.E. Hilda Heine and the Moroccan ambassador to the COP 22 Presidency, Aziz Mekouar ensured that governments are rallying to respond to the call from the 100% RE movement. Other speakers included CVF Chair and State Minister of Environment, Forest and Climate Change in Ethiopia, Kare Chawicha; Chief Executive Officer of Sustainable Energy for All, Rachel Kyte; IKEA CSO, Steve Howard; and Vice Mayor of Oslo, Norway, Lan Marie Nguyen Berg.

Building on the momentum generated by the event and subsequently the CVF's Marrakech Vision, the multi-stakeholder partnership seeks to strengthen and grow the movement even further to mainstream 100% RE.

100% Renewable Energy to stay below 1.5°C

SHIFTING FINANCIAL FLOWS

2016 also marked the year when the CAN Secretariat started its first engagement in sustainable finance. After an initial exercise mapping the actors involved and members' interests, the team focused on two important fronts.

On the first front, CAN enhanced the role of public finance in shifting capital towards investments compatible with the 1.5°C pathway and the Sustainable Development Goals (SDGs). The CAN Secretariat focused on aligning members' strategies, plans and messaging on sustainable public finance; as well as widening the number of organizations working on the issue.

To achieve this, CAN:

- » Facilitated strategic discussions aimed at International Financial Institutions (IFI) finance;
- » Engaged civil society in the World Bank's Annual Meetings;
- » Developed actions to influence IFI investments;
- » Created public investment certainty for RE through the 100% RE feasibility narrative.

In effect, the CAN Secretariat established a cross-cutting, multi-stakeholder coordination group called 'IFIs-Decarbonize', with participation from civil society organizations, think tanks, business-facing NGOs, faith based groups, etc. The 100 plus members of the IFI-Decarbonize group worked collectively to define the 2017 Multilateral Development banks (MDBs) strategy for the Network targeting The World Bank, the Asian Infrastructure

Investment Bank, the African Development Bank and their client/shareholder countries.

On the private finance side, CAN focused its strategy on the following activities:

- » Building the capacity of the network on sustainable private finance
- » Establishing CAN as a credible actor in the space
- » Actively engaging and contributing in policy areas pertinent to sustainable finance

The work included creating a weekly briefing for members and partners on the latest developments in sustainable finance in areas such as green equities, debt, and other key policy developments. The recaps also provide analysis of key reports and trends, as well as links to resources members can use to engage in the topic. The membership of the recap now extends to both CAN members and trusted partners from both the public and private sector.

The CAN Secretariat also worked with Mission2020 to organize a high level multi-stakeholder strategy meeting during Climate Week in New York. The session brought together a selected group of leaders to build relations among them and develop common plans for 2017.

CLIMATE DIPLOMACY

Throughout 2016, CAN geared its policy and communication activities around key moments, such as the SB44 in Bonn, the G20 summit, and the UN General Assembly, towards advocating for the ratification for the Paris Agreement for its early entry into force. Following that watershed moment in early October, the Network prioritized the technical work

CAN is working to align Network members' strategies by generating strong joint goals, strategy and messaging, and widening the circle of those engaged in 'shifting financial flows towards 100%RE' campaign

\$90 Trillion in investments needed by 2030 to meet SDGs

Shifting Financial Flows

around the "rulebook" to ensure the speedy and effective implementation of the Paris Agreement starting with the COP in Marrakesh.

At COP 22, which coincided with the US Elections, CAN made a concerted effort to communicate and uphold the integrity of the Paris Agreement following uncertainty arising from the new administration's position on climate policy. At the policy meetings and the CAN Daily sessions, the network intensified efforts to align positions and messaging amidst a changing political landscape. CAN also issued a statement urging the US government to keep climate change on top of its priorities.

2016 also marked the amendment to the Montreal Protocol to phase out heat-trapping hydrofluorocarbons — another feather in the cap for strong climate action. Prior to the high-level ministerial meeting in Kigali in October, the CAN Secretariat worked throughout the year with members to develop a position paper on short-lived climate pollutants. Advocacy efforts focused on pushing countries to commit to an early and ambitious phase-down schedule for these "super" greenhouse gases, which would result in substantial near-term benefits in reducing warming.

During these UNFCCC sessions CAN also published a daily ECO newsletter to inform countries of the daily priorities of the Network. ECO was also translated to

French and Spanish to have a broader reach across delegations. Approximately 6,000 individuals were reached. In June-September, ECO "in-between" editions were published, to highlight key climate policy developments. These were distributed to national focal points, key figures within the negotiations, and regular subscribers via email.

One of CAN's signature COP activities — Fossil of the Day — marked 18 years of celebrating the best of the worst during the UNFCCC negotiations in Marrakech. In 2016 the Fossil of the Day Awards asserted pressure at a national or regional level and called out activities that directly hindered the implementation goals of the Paris Agreement. In doing so, civil society was able to highlight issues such as expanding coal operations, emission reductions, and a lack of boosts to clean energy.

The ultimate award — the Colossal Fossil — went to Russia for lobbying for nuclear power deployment, abstaining from ratifying the Paris Agreement, and neglecting to add a fossil fuel phase-out to their emission reduction plans.

A special award, Ray of the COP, was also given to the Climate Vulnerable Forum (CVF) for their historic announcement, which saw 48 countries commit to achieving 100% renewable energy by latest 2050, if not before.

Committed to achieving **100%** Renewable Energy by **2050**

Constituting **25%** of the countries in the climate process

CLIMATE VULNERABLE FORUM

48 governments
(11 founding countries
32 additional members)

Development of long-term decarbonisation strategies by **2020**

PARTNERING WITH THE CVF

The successful partnership that CAN established with the Climate Vulnerable Forum (CVF) in 2015 has helped deliver a strong Paris Agreement, in particular, the language around the 1.5°C global temperature increase limit. This partnership was continued and further solidified in 2016. During the year, as part of the Expert Advisory Group of the CVF, CAN experts assisted the CVF leadership in the formulation on a CVF vision document and communique that was agreed in a historic breakthrough during COP22. In this vision, the 48 members of the Climate Vulnerable Forums (CVF) committed to achieving 100% renewable energy by, at the latest, mid-century, during a high-level ministerial meeting held on the last day of the UN climate talks in Marrakech (COP 22). The adopted vision and communique contained more than just a 100% renewable energy path.

In the mindset of the Sustainable Development Goals (SDGs) "leaving no one behind", the CVF countries vowed in their vision to end energy poverty, protect food and waste security, adapt to climate impacts, establish carbon pricing, actions, and create jobs in renewables. The document also contained the commitment of the countries to submit new climate commitments and develop long-term decarbonisation strategies by 2020.

Constituting 25% of the countries in the climate process, the CVF's declaration has significantly increased the stake of commitment, urging other countries to follow. Shortly after the declaration, the European Union Climate Action and Energy Commissioner Miguel Arias Canete said, "the EU stands with them [the CVF] and their commitment to greater ambition in the years ahead."

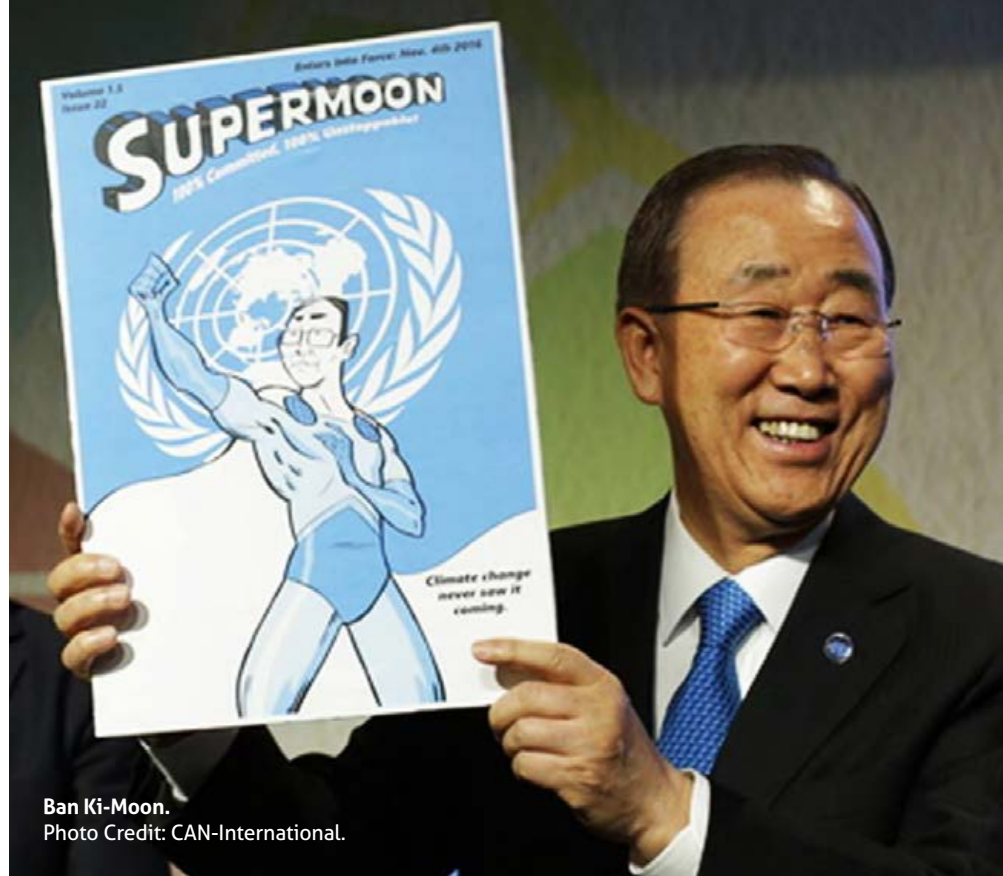

Given the importance of the CVF declaration for global climate action and ambition, the Marrakesh Vision and Communiqué are an important milestone for the partnership between the CVF and CAN. It urges all other countries, especially developed ones, to raise ambition if they do not want to be left behind by the most vulnerable of countries. The declaration showcases "pathways to achieving 1.5°C" by connecting governments, civil society, campaigns and narratives to build up public awareness and mobilization to drive forward necessary changes for a climate-safer world.

13 July 2016. New York. HLPF Side Event: "From theory to practice: Integration of sustainable development and climate change planning". Photo Credit: CAN-International.

The Secretariat further supported the CVF by managing partnerships with relevant stakeholders (including the UNFCCC Secretariat, the COP 22 Presidency in Morocco, China, Germany, United States, etc.); as well as amplifying communication around the important moment and assisting in coordinating the high-level ministerial meeting itself.

Perhaps the most important impact of the CVF vision is that it helped to energize the movement after Trump winning the US election. The ambitious CVF vision was a proof that no matter what the US did, the world, including the most vulnerable countries, will continue to push on. To ensure a continued momentum generated by the CVF declaration, the CVF committed in their Marrakech Communiqué to organize a CVF Heads of State Summit in 2018. Currently, CAN is working closely with the CVF leadership in its preparation.

Ban Ki-moon.
Photo Credit: CAN-International.

BAN KI-MOON FAREWELL

COP 22 in Marrakech was the last round of international climate negotiations during Secretary-General Ban Ki-moon's 8-year tenure at the Head of the UN, which reached its terms at the end of the year. To mark the occasion, CAN coordinated an event bringing all observer constituencies together for a joint farewell to thank Ban Ki-moon for his leadership on climate issues, and to encourage him to continue his inspiring work in the future as a member of civil society.

Members of environmental organizations, youth, women and gender groups, businesses, trade unions, indigenous people, farmers, faith groups and research organizations wanted to express gratitude for Ban Ki-moon's support in the struggle to reach breakthroughs and commitments by governments such as in the process to secure the Paris Agreement.

A member of the Indigenous people's organizations constituency, Hindou Oumarou Ibrahim from Chad warmly thanked the Secretary-General for his efforts to bring the climate agenda to the forefront and make it a priority throughout the UN system. Youth groups recalled the moment when the UN Secretary-General joined the people's climate march in New York in a show of solidarity and commitment to the cause and movement: "Mr. Ban Ki-moon will always be the pride

of Asia for his inspiration that bestows upon us youth a shared duty to carry on what he has started in our time. (...) I particularly enjoyed seeing Ban Ki-moon at the front of the climate march in September 2014 in New York, joining thousands of youth across the world." said Jing Liu from China. Business leaders recognized the Secretary-General's role and vision in widening the scope of climate change engagement and placing it at the top of political agenda but also the business agenda. "You have focused minds and catalyzed action to help build early momentum, this has enabled us to have the Paris Agreement and the Sustainable Development Goals" said Paul Simpson, Chief Executive Officer of CDP and Board Member of We Mean Business.

Before joining the crowd behind a banner saying, "Climate action is unstoppable, 1.5 is possible" Ban Ki-moon thanked the speakers and the audience for the warm words and send-off, as well as for the small gifts, one of which represented him as climate hero "SuperMoon." He said: "Soon, I will be sitting amongst you."

13 July 2016. New York. HLPF Side Event: "From theory to practice: Integration of sustainable development and climate change planning".

NETWORK DEVELOPMENT

After finalizing the new strategic plan, Node Coordinators and staff from various nodes gathered for another five days to dive deeper into the new strategy and to further translate its elements in light of the nodes' priorities, discussing how best to work together as "ONE CAN" in order to implement the various strands.

Throughout the year, through the Secretariat's Network Development Department, nodes were supported where needed to further strengthen their structures, support their coordination tasks between the national, regional, and international levels, and to activate members and catalyze and amplify activities. Various tools were created to this effect such as 101 guide for Node Coordinators, and an internship program with nodes (piloted with Pacific Islands CAN).

The CAN Secretariat also organized half a dozen webinars, on key topics such as: Understanding the Paris Agreement, the Montreal Protocol, G20, Preparing for COP 22; as well as specifically on how to make most of key moments and using communications tools. During COP 22, several capacity-building sessions included an Introduction to COP and 101 sessions on Climate Finance, Increasing Ambition Post-Paris, Civil Society Participation & Human Rights, Adaptation & Loss and Damage, and campaigning on 100% RE.

In early 2016, three Fellows successfully completed their participation in the Leadership Development Program (LDP), and two new Fellows joined the program a few months later. The current program runs until early 2018, and will offer many possibilities to the fellows to strengthen their skills, competencies and experience in policy, campaigning, communication, and support their respective nodes.

- » This year, Climate Action Network — Réseau Action Climat (CAN-Rac) Canada successfully hosted its 1st Annual ClimaCon: Canada's largest gathering of Climate Heroes, with over 200 participants. They discussed the vision for a successful Canadian climate action. ClimaCon aims to nurture a thriving and diverse Canadian climate movement, where people from every corner of the climate movement come together to learn, share stories, build relationships and have fun.
- » CAN Canada also initiated policy development on a Canadian accountability mechanism, international climate financing and carbon markets, electricity infrastructure modernization, carbon pricing and fossil fuel subsidies.
- » Catherine Abreu took over as Executive Director, bringing a wealth of campaigning, communication, coordination, government relations experience, and a proven ability to execute longer-term strategic visions and connecting with partners and audiences. Nhattan Nguyen also joined the team as CAN-Canada's new Operations and Outreach Administrator, coming on the heels of an internship with CAN International and with substantial experience of participating in the UNFCCC process.
- » CAN Canada also initiated policy development on a Canadian accountability mechanism, international climate financing and carbon markets, electricity infrastructure modernization, carbon pricing and fossil fuel subsidies.

To give just a brief snapshot, below you will find some highlights from three nodes:

- » In 2016, CAN-Tanzania worked in two main projects: "Strengthening and Improving the Contribution and Efficiency of Environmental CSOs for National Climate Resilience and Poverty Reduction in Tanzania and "100% Renewable Energy, Low Carbon Development and Poverty Reduction in Tanzania."
- » A training was delivered with Members of Parliament on renewable energy, while stakeholder discussions were held around the African Renewable Energy Initiative.
- » A study tour to Bangladesh with 12 parliamentarians, CSOs, media and government official representatives was organized to explore Bangladesh's experience in rapidly expanding renewable energy access among rural communities.
- » The organization's constitution and the organizational structure were reviewed, a main office in Dar-es-Salaam was established, now hosting 2 full time staff and national and international interns. Several new members joined the node, and its website was revamped.
- » CAN Tanzania has established a new department called "Research, training and outreach". The department developed a baseline study on "Climate Financing: Analysis of the Role of Low Carbon Development Pathways in Poverty Reduction in Tanzania", and the policy review on "Low Carbon Development, Climate Finance and Poverty Reduction Strategies in the East African countries: What Tanzania can learn from other countries in the region".
- » Several media briefings were organized: around COP, and on the role of climate finance and renewable energy, in low carbon development and poverty reduction.

- » In April 2016, the China Civil Climate Action Network (CCAN) organized its Annual Meeting in Tianjin with 30 participants.
- » CCAN members organized the successful one-day low carbon drawing competition "Under the sky." The winning works were made into postcards, and displayed in the China Pavilion during COP22.
- » The Fifth East Asia Forum on Climate Change was held in Kyoto, Japan, during September with 76 representatives from China, Japan and Korea. An agreement was reached on 2 joint projects: "Climate Change Education" and "Beyond Coal". Participants visited the Wood Keihoku solar electricity sites, and learned about CAN experiences in South Asia through the presentations given by CANSA Director Sanjay Vashist.
- » During COP22, and with the support of the CAN Secretariat, CCAN hosted an exchange workshop with CAN Europe and the Beijing NGO Association for International Exchanges. More than 30 representatives from Europe, Africa and U.S. discussed Climate Finance and Adaptation, and the NGO's role in the implementation of the Paris Agreement.
- » A youth side event as well as the side event "Climate change and rural development", were also organized during COP22. The latter gathered representatives from China, Vietnam and Myanmar, and introduced the Climate Adaption Program experience in rural area of Shandong and Inner Mongolia.

Mark Raven, Lina Dabbagh, Emily Hickson.

STRENGTHENING REGIONAL COMMUNICATIONS

In mid-2016, CAN recruited five Regional Campaign Communication Officers (RCCs) to support Nodes in strengthening communication efforts in the following regions: Eastern Europe, Caucasus and Central Asia (CAN EECCA), Latin America (CAN LA), Arab Region (CAN AW), Sub-Saharan Africa, and Southeast Asia (CANSEA).

The regional communicators focus their efforts on a close collaboration with the Nodes to identify communication opportunities. This includes strengthening capacity, amplifying national and regional stories of CAN members, increased strategic communication work on key regional moments, and integrating international key moments into the regional media. The RCCs also helped to increase regional media output during COP, especially with regard to the historic CVF Marrakech vision.

Looking forward, the regional communicators will further work on increasing the visibility of members and Nodes in the media, helping to shape national and regional narratives to push for climate ambition in line with CAN's strategy.
