

# eco

*ECO has been published by Non-Governmental Environmental Groups at major international conferences since the Stockholm Environment Conference in 1972. ECO is produced co-operatively by the Climate Action Network at the UNFCCC meetings in Marrakech, Morocco during the November COP 22 meeting. ECO email: [administration@climatenetwork.org](mailto:administration@climatenetwork.org) • ECO website: [www.climatenetwork.org/eco-newsletters](http://www.climatenetwork.org/eco-newsletters) • Editorial/Production: Linh Do*

## VIP Checklist

ECO is delighted to hear that approximately 80 Heads-of-State and Ministers made their way to Marrakech to show continued climate leadership in the high-level segment of the COP, the CMP and the CMA today.

Want to know the level of leadership shown by your Heads-of-State and Ministers? Keep track by completing this check list (tick all that apply). Come on, you know you want to...

CHECK LIST – Did your country show climate leadership?	
Did your HoS/Minister announce if your country is <b>ratifying the Doha Amendment</b> ?	
Did your HoS/Minister commit to <b>significantly increase adaptation finance</b> beyond current plans and projections? (Developed Countries)	
Did your HoS/Minister make a <b>financial pledge to the Adaptation Fund</b> to meet the fundraising goal of \$80 million by COP22? (Developed Countries)	
Did your HoS/Minister <b>announce any new initiative</b> to accelerate mitigation ambition? (E.g. on renewable energy, energy efficiency, fighting deforestation)	
Did your HoS/Minister indicate that your country would <b>fast-track national implementation of the Kigali Amendment to Montreal Protocol</b> ?	
Did your HoS/Minister commit to <b>early implementation or revision of their current NDC</b> ?	
Did your HoS/Minister stress the <b>need to have a successful Facilitative Dialogue 2018</b> where ambition is accelerated?	
Did your HoS/Minister stress the need to <b>conclude negotiations on Paris rulebook by 2018</b> ?	
Did your HoS/Minister <b>show political intent to continue national implementation of the Paris Agreement</b> regardless of political changes in the world?	

## Capacity Building Takes Off

ECO welcomes the capacity building decisions adopted yesterday. Given the increased expectations that have been placed on developing countries by the Paris Agreement, capacity building—as well as other means of implementation—will be crucial to enable these Parties to successfully implement their commitments. This is especially true for those Parties with the least capacity, and for those most vulnerable to climate impacts.

Cooperation on matters related to capacity building represents, perhaps, one of the most promising avenues for accelerating implementation of the Paris Agreement. Working together can enable Parties to develop collective ambition, while simultaneously providing important benefits for participating countries. The adoption of the Paris Committee's terms of reference will enable the Committee to become operational as early as next year, and to rapidly initiate its work.

The decisions adopted yesterday also invite the Paris Committee to take into consideration cross-cutting issues such as gender responsiveness, human rights and indigenous peoples' knowledge. ECO welcomes this important mandate. It will enable the Committee to support Parties as they implement climate actions in a manner that is coherent with existing human rights obligations and related international principles, such as the Sustainable Development Goals.

ECO hopes this commitment to consider cross-cutting principles in climate action, as reiterated in Paris, will also be reflected in the negotiations under the APA more broadly. For instance, future Nationally Determined Contributions should reflect this approach and highlight synergies with other related international norms, such as human rights, the rights of indigenous peoples, gender equality, just transition and food security. Parties should not shy away from making the universal attainment of human rights a reality through coherent implementation of the Paris Agreement: we now know that the Paris Committee will be supporting them along the way.

## Be Trudeau To Your Word

The United States has dominated COP22 headlines with orange becoming the new black. However, ECO noticed there is another corner of North America that has a key role to play in negotiations. Yes, we are looking at you, Canada. ECO waits with bated breath to see how consistent Canada will be with their policy and action.

It was thrilling to see Canada involved in hammering out the Paris Agreement last year. Their efforts now mean that eyes are on them to help ensure they get the details right at COP22, the time for implementation. To date, the delegation has been constructive in negotiations, aiming to get the necessary pieces in place by 2018. Canada has also been heard on the boulevard of Bab Ighli heralding a Pan-Canadian Climate Plan it is developing to meet its 2030 commitments.

While ECO is very pleased to see such progress, apparent contradictions between Canada's climate policy leadership and energy infrastructure decisions dampen our joy quite a bit. Canada recently approved a controversial liquefied natural gas project, and rumour has it that other polluting projects are in the pipeline.

No conference is complete without a heckler, and this one has been no different: Earth Institute Director Jeffrey D. Sachs warned that it is not acceptable for a country like Canada to dream of decarbonising its own economy while making a living from oil and gas exploitation. Although carbon sequestration is part of the plan, it must be clear that offsetting and compensating will not do the trick here. Canada must not behave like a "drug pusher of fossil fuels to the rest of the world," said Sachs.

ECO suggests it is time for Canada to do some soul searching. Their leadership is needed now more than ever, and it can't be destabilised by internal contradiction. Instead of merely offsetting their emissions, ECO urges Canada to instead offset the devolution proposed by their neighbouring North American country by being consistent with their commitments. There's no point in having a cool and charming Prime Minister if you don't deliver when it comes to the real deal.

---

## Ministers Wanted

The Facilitative Dialogue on ambition and support will be held on Wednesday at 10am. ECO knows this should be obvious to all, but we would like to emphasise that the whole point of a high level "ministerial deliberations" is the presence of Ministers. This is particularly important when the topic is how to muster the political will needed to significantly ramp up Parties' ambition and support!

ECO reminds Ministers that the planet is already suffering from a climate-induced high fever. Unless Ministers are able to present a note from their personal physicians justifying their absence, their countries will stand an excellent chance of receiving a Fossil of the Day.

### *100% Renewable Energy for 1.5°C*

**When: November 15, 1830-2100**

**Where: Arctic Room, Area E**

Hosted by the COP 22 Presidency, in partnership with the Climate Vulnerable Forum, this exciting event brings together a diverse group of leaders from civil society, governments, and businesses for an unprecedented dialogue.

"100% Renewable Energy for 1.5°C" will make the case for a transition to 100% renewable energy as the ethical, feasible, financially sound, and logical approach to address climate change and keep global warming below 1.5°C.

Full programme and speaker overview available at  
**[www.climatenetwork.org](http://www.climatenetwork.org)**

Access to the event is by RSVP only using this link:
